

**OPERATIONS
REPORT**

May 27, 1955

FOREIGN OPERATIONS ADMINISTRATION

FY 1955, Issue No. 3

PPD-XCB-002

P R E F A C E

This Operations Report is prepared by the Statistics and Reports Division of the Office of Research, Statistics, and Reports; Foreign Operations Administration; Washington, D.C.

The report is designed to reflect the new operating procedures established by FOA for fiscal year 1955, covering "project", "non-project", and "special" types of assistance.

(1) **Project-Type Assistance** covers all activities of FOA which are primarily designed to assist cooperating countries directly in the development or accomplishment of specific undertakings or enterprises. The technical cooperation program is carried out through the project method, under various fields of activity, such as industry and mining, agriculture and natural resources, etc.

(2) **Non-Project Type Assistance** is designed primarily to accomplish the transfer of resources from the U.S. to the cooperating countries to enable them to meet broad economic or defense support needs. This includes the "commodity programs" carried out by means of procurement authorizations (p.a.'s).

(3) **Special Assistance** covers assistance to refugees and certain emergency aid programs to areas stricken by war, drought, floods, etc. "Special assistance" procedures and techniques are hand-tailored for speed and efficiency to suit the needs of the situations which require this form of aid. Both project and non-project techniques are utilized.

P R O G R A M S U M M A R Y

Highlights of some important activities carried on by FOA are shown in the operations charts included in this report. Further detail, on a cumulative or trend basis, with special emphasis on current activities in fiscal year 1955, is presented in the Statistical Appendix beginning on page 33. Separate tables of contents listing the statements carried in each section of the appendix are shown on pages 33, 65, and 83, printed on colored paper for ready access.

*...IN THE ECONOMICALLY
UNDERDEVELOPED AREAS*

PROBLEMS OF ECONOMICALLY UNDERDEVELOPED AREAS

About 1.1 billion people, or 65 percent of the free world's total population of 1.7 billion, occupy the economically underdeveloped areas of Asia, Africa, and Central and South America. These people, after centuries of living at a virtual economic standstill, are becoming increasingly alive to the opportunities for advancement in living standards made possible by modern economic and scientific knowledge and technological improvements.

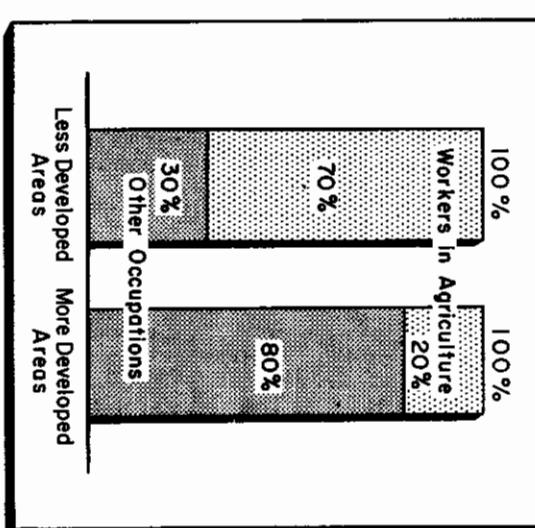

The people of the underdeveloped countries must meet a multitude of difficult problems if they are to find the better life they seek. From an economic standpoint, they live at bare subsistence levels so that they cannot generate the savings necessary to provide sufficient capital for economic expansion. Their economic structure for the most part is too heavily weighted in favor of agriculture in relation to the need for industrial and minerals development. They lack the basic public services—transportation, communications, power—so vital to economic expansion. They do not have enough trained personnel available to carry out essential functions of administration and management in either government or industry.

Low National Product

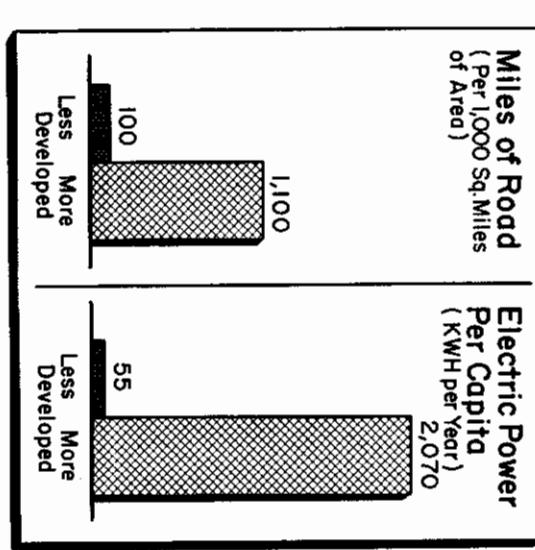

Note: For these estimated comparisons, the less developed areas generally include free world countries of Asia (except Japan), the Near East, Africa, and Latin America for which data are available; the more developed areas include the United States, Canada, Western Europe, Australia, and New Zealand.

Unbalanced Economies

Lack of Basic Facilities

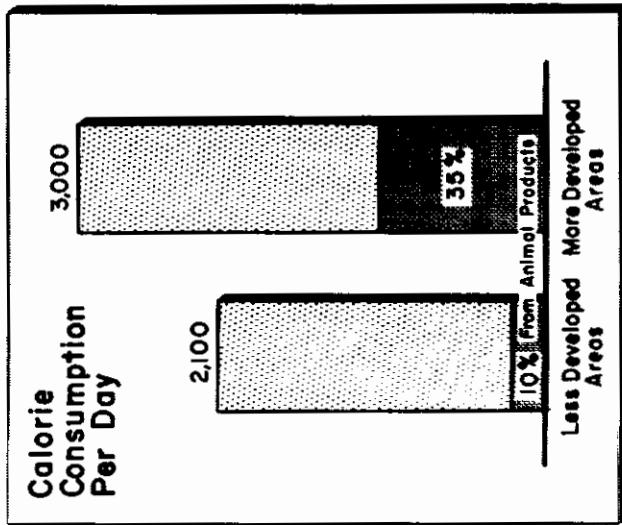

PROBLEMS OF ECONOMICALLY UNDERDEVELOPED AREAS

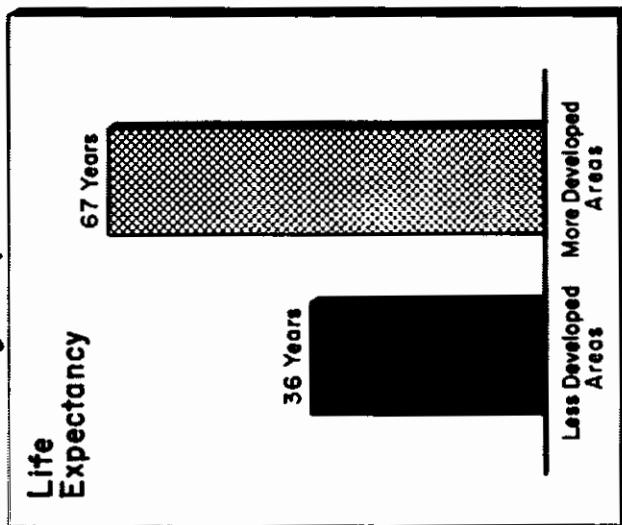

In the majority of the underdeveloped countries, diets are inadequate in both quantity and nutritional value. Diseases such as malaria, trachoma, and yaws are widespread, sap the energies of the people, and cut them down at a relatively early age. Educational facilities are rudimentary or non-existent. People who can neither read nor write are deprived of one of the most valuable keys to self-improvement; they are largely estopped from acquiring the skills and knowledge they need to cope with their problems intelligently.

The fact that these problems of the economically underdeveloped areas have been frequently described and reiterated does not make them easier to overcome. Their solution demands hard effort and constant application by the people and governments of the underdeveloped countries over a long period of years and requires the full cooperation of the more advanced countries of the free world.

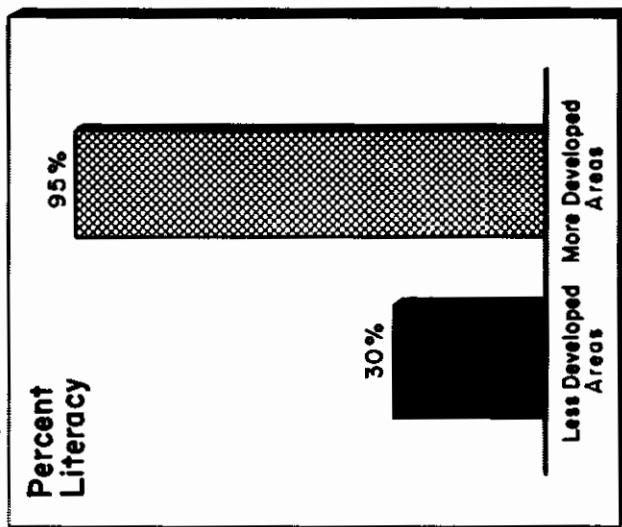

Poor Diets

Short Life Spans

Widespread Illiteracy

TECHNICAL COOPERATION IS A PRACTICAL WAY TO REDUCE THOSE PROBLEMS

Under the technical cooperation program, the United States is sharing its developmental knowledge, and its economic and scientific techniques with free people of different countries who are bending their energies increasingly toward self-betterment. The technical cooperation program is in no way attached to the various programs of military assistance. No country which requests technical assistance is obliged to cooperate with the United States on a military program in order to participate in a joint technical cooperation program.

It is in our enlightened self-interest that we support the work other free countries are doing to raise their living standards and broaden and diversify their economies. Their progress is inextricably joined with that of the United States, whether it be from the standpoint of assuring availability of needed raw materials, creating expanded world markets for trade, having strong partners in the fight against aggression, or for plain humanitarian reasons. The concept of technical cooperation hinges on the principle of partnership of effort. The economically underdeveloped countries must, of course, shoulder the primary responsibility for moving forward with their development programs. Technical cooperation measures supplement, not supplant, the work which the participating countries are doing for themselves. The interchange of knowledge and skills is designed to speed that work and to make it more effective and productive.

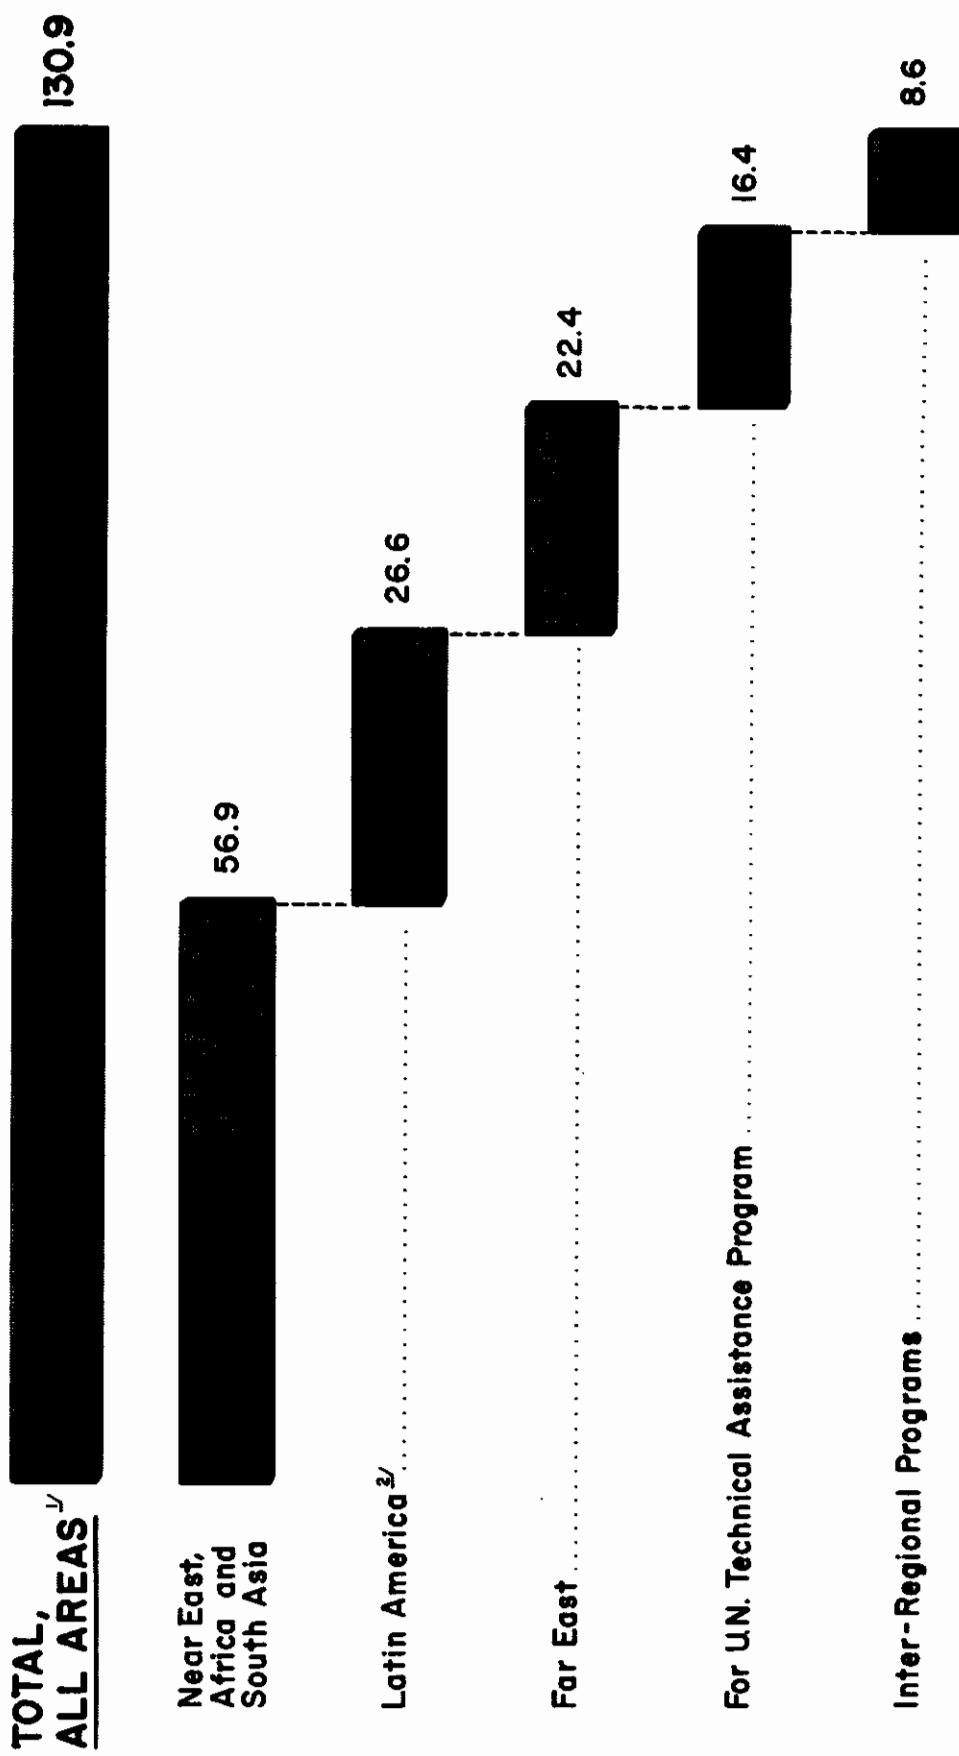

Technical Cooperation Is A Means To:

- 1 Build Local Skills**
by training people of the underdeveloped areas, both in their own country and in the United States, so that they can take on greater responsibility and, in turn, train others in the professional and administrative techniques necessary to carry on adequate domestic development programs.
- 2 Make Full Use of Available Capacity**
by applying modern knowledge and methods to insure that existing resources, materials, and labor are used with maximum effectiveness, and that potential resources are realized to the greatest possible extent.
- 3 Smooth the Way for Investment Capital**
by developing native technical abilities, increasing the availability of skilled labor, improving health and sanitation, and in general creating in the participating country a climate of greater confidence, stability, and opportunity.
- 4 Demonstrate by Deeds United States Interest in the Advancement of Other People**
by active participation of American specialists in joint programs and projects, supported mutually by the United States and participating countries, which work in a concrete way to better conditions, raise living standards, and otherwise promote progress in the underdeveloped areas.

THE TECHNICAL COOPERATION PROGRAM

U.S. TECHNICAL COOPERATION IN FISCAL YEAR 1955

(Amount Programmed in Millions of Dollars)

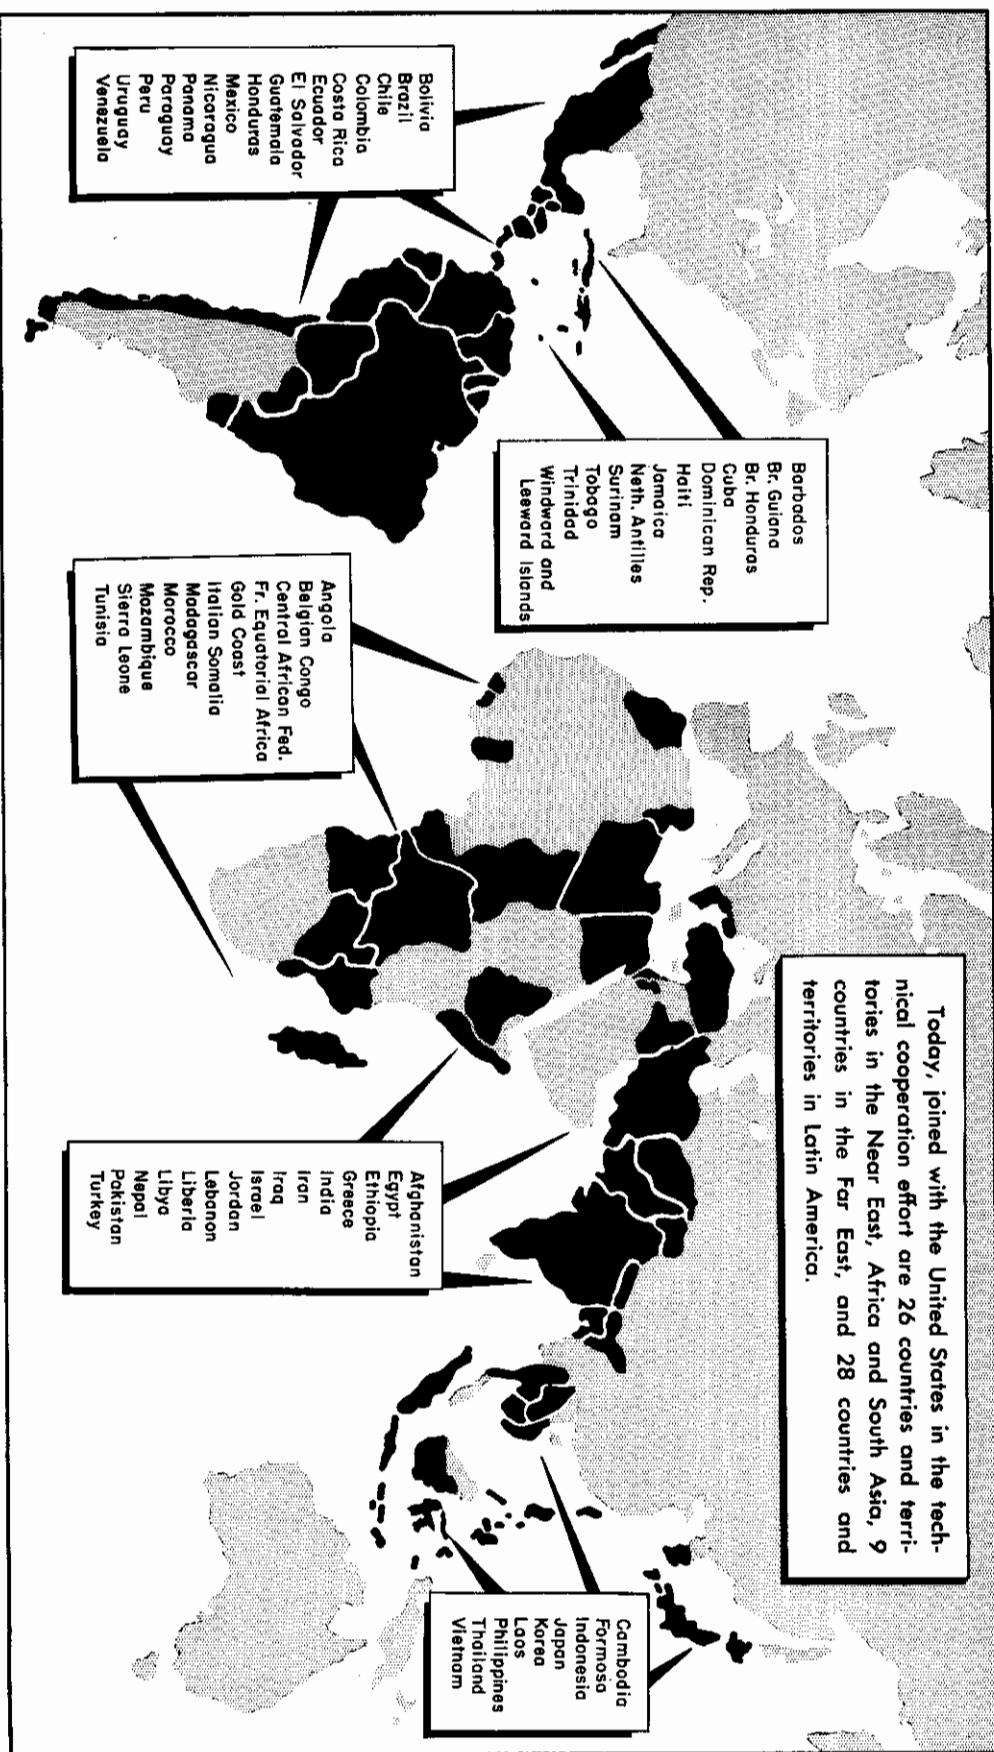

^{1/} Includes technical cooperation programs in Greece and Turkey; excludes technical exchange programs in Europe.

^{2/} Includes U.S. contribution of \$1.5 million to Organization of American States.

THE CONCEPT OF TECHNICAL COOPERATION HAS TAKEN ROOT AND SPREAD

More and more, countries in the economically underdeveloped areas of the free world have asked to participate in joint technical cooperation programs as they see the striking results that can be produced in terms of greater productivity of land and labor, more food, improved health, and better educated children.

Today, joined with the United States in the technical cooperation effort are 26 countries and territories in the Near East, Africa and South Asia, 9 countries in the Far East, and 28 countries and territories in Latin America.

HOW TECHNICAL COOPERATION WORKS

① Through Projects in Basic Fields of Activity

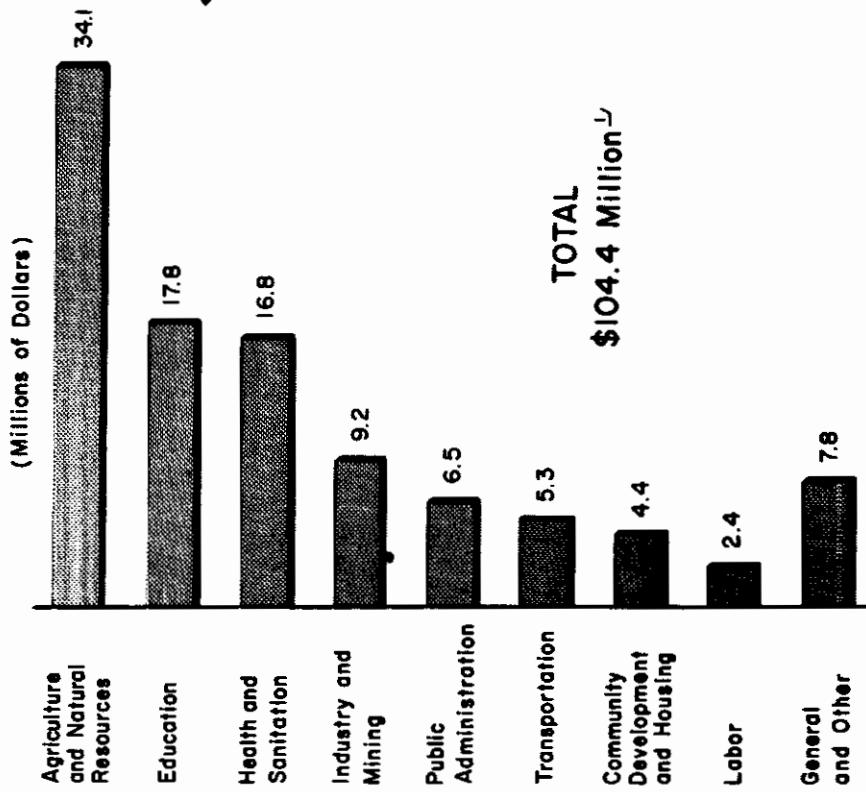

The Foreign Operations Administration works with the government and people of the participating country to develop and carry out specific technical cooperation projects in key fields important to the progress of economic development.

These projects are conducted in various ways. They may be demonstration projects to show how to use certain tools and equipment—such as an improved plow or an X-ray machine, and how to apply certain techniques—such as tubewell-installation and water-spreading for arid lands or insecticide-spraying for malariaous regions. They may be model operating projects to serve as a pattern for wide-scale adoption—such as hybrid-seed cultivation plots, health clinics, or industrial productivity centers. They may involve the surveying of mineral and power resources, the development of teacher-training and vocational courses, or the improvement of government procedures in budget-making, census-taking or customs administration.

The participating country contributes a fair share of the costs of program projects, either in local currency or services and facilities. These country contributions in cash and kind have been increasing steadily in proportion to the United States contribution, especially in those areas where the program has been under way for a number of years.

FOA'S CURRENT EMPHASIS ON TECHNICAL COOPERATION ACTIVITIES

Estimated Use of FY 1955 Funds by Field of Activity

¹ Excludes U.S. participation in multilateral agencies and inter-regional programs; detail does not add exactly because of rounding

HOW TECHNICAL COOPERATION WORKS

② By Sending U.S. Technicians Abroad

American technicians overseas work side-by-side with local officials, professionals, farmers, and factory workers to give requested technical advice and guidance. These technicians work with the various government ministries, with local institutions, or with people in the outlying villages, depending upon where they can do the most good. The number of technicians serving abroad under our technical cooperation program has steadily increased.

The placement of technicians and the fields in which they work are planned to fit the particular situation in the participating country involved. While working at the "grass-roots" level is often the most effective means of fulfilling the basic objectives of the program, care must be taken not to spread the relatively small number of available qualified specialists so thinly that their impact is dissipated. Fifty or even 150 technicians in a country with many millions of people would have only an isolated and minimal effect if they attempted to deal exclusively on a decentralized basis.

In many cases, a program focused on the development of efficient indigenous institutions in the key centers of a country, and on the training of local nationals at such centers to do further work in the field and pass on their acquired knowledge to their own people, can be infinitely more productive in the long run. This method of operation is also consistent with the cardinal principle that the agencies and people of the participating country carry on the function of spreading knowledge and effective techniques after American technicians leave. In this way, technical cooperation produces a permanent net gain in free world strength and stability.

^{1/}Number of U.S. personnel paid from program funds, excluding 119 employed in Europe.
^{2/}Number of technicians employed by private contractors not reported before 1955.

HOW TECHNICAL COOPERATION WORKS

② By Bringing Participants to the United States for Training

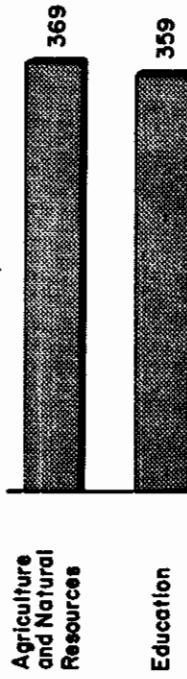

Some types of higher level technical study and training can best be provided in the United States. Participating countries therefore send selected individuals and groups to this country as another means of increasing their supply of local skilled personnel. The majority of incoming participants are between 35 and 40 years old, with a relatively high educational level.

Incoming Participants Are Generally of Two Types:

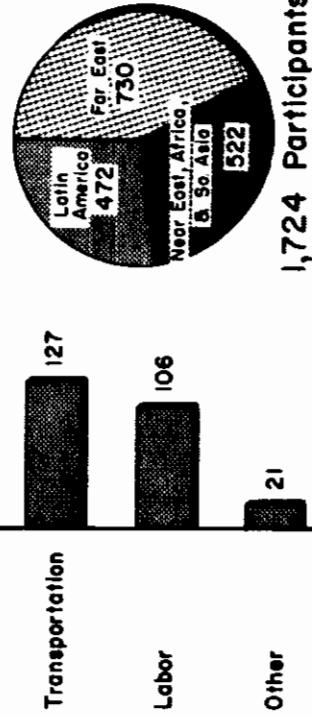

- (1) Those who make up specialized groups or teams which come to the United States for relatively short periods (6 to 8 weeks) to observe at first-hand American principles, methods, and approaches used in particular problems within their field of interest, and to see how a free-enterprise system promotes an expanded economy and creates greater opportunities.
- (2) Those who come for longer periods (generally up to one year) for intensive studies in American universities, industrial plants, government agencies, farm organizations, and other institutions where they can acquire the specific knowledge and techniques which will help them speed progress in their own country.

PARTICIPANTS FROM UNDERDEVELOPED AREAS ARE ACQUIRING VALUABLE KNOWLEDGE IN THE U.S.

Participants in U.S.^j by Major Field of Study
As of March 31, 1955

195 By Area of Origin

1,724 Participants

^j From underdeveloped areas only, excludes participants from Europe totaling 603 as of March 31, 1955.

HOW TECHNICAL COOPERATION WORKS

④ Through Contracts With U.S. Universities

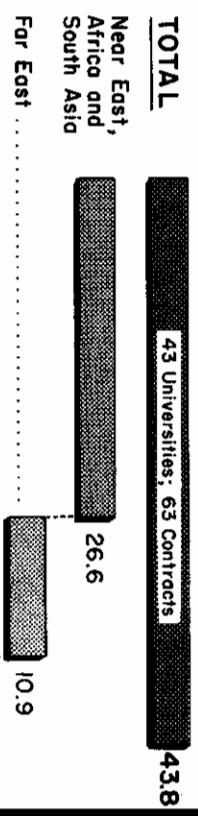

American colleges and universities are taking an increasingly active part in technical cooperation programs around the world. Under an FOA-sponsored university contract, usually for a three-year period, an American educational institution undertakes to assist a foreign school or government ministry in specific fields of development, determined by the needs of the country requesting such assistance and the special capabilities of the American institution involved.

Bringing American universities into the technical cooperation program on a larger scale produces a number of advantages. It makes available the wide resources and experience which our educational institutions have developed over many years. It adds to the supply of competent technicians qualified for overseas work. It broadens the participation of private U.S. organizations in the program. It encourages the development in other countries of indigenous centers which can provide the extension, demonstration and advisory services which have made such an outstanding contribution to our own economic development. In cases of inter-university contracts, the mutual affiliations which develop between institutions and faculty members during the contract period encourage continued close relationships and activities long after government financing has come to an end.

As of May 3, 1955

① SOME RECENT ILLUSTRATIVE RESULTS

Bigger Potato Crop in Guatemala

The introduction of a blight-resistant potato in Guatemala promises to put an end to periodic shortages during which potato prices have risen sky-high for the consumer.

Up to now, Guatemalan potatoes have been a dry-season crop with yields of about 60 bushels an acre. Guatemala's regular rainy season brought widespread blight and crop loss. The recent planting of the hardy Kennebec variety, brought in from the United States, has made it possible for the first time to grow potatoes in Guatemala during the rainy season. Not only does the Kennebec potato resist late blight, but it now produces about 300 bushels per acre during the wet months.

The Kennebec variety made its entrance into Guatemala in 1952 in the form of six potatoes brought in by a United States technician. The good showing made by seeds from the six potato samples has led Guatemala to import 700 hundred-weight of Kennebec seed thus far in 1955.

Longer Life in Brazil

In Brazil's Amazon River Valley, where a cooperative health program has been in operation since 1942, nearly 60 health centers have been put into operation. These centers are now being run almost entirely by Brazilian technicians, most of whom were trained as part of the cooperative program. A statistical check has revealed that the average life expectancy of the valley's two million people has been increased from about 34 years to nearly 48 years, a gain of over 40 percent.

More and Better Teachers in Ethiopia

As a result of the cooperative effort of American technicians and the Ethiopian Ministry of Education, Ethiopia has made encouraging improvements in its educational system. In 1952, in all Ethiopia there were only about 200 teachers who had more than an eighth-grade education. Only 118 students

were enrolled in teacher-training courses that year, and only 35 new teachers could be supplied to staff Ethiopia's schools.

Today, more than 600 qualified students are enrolled in government teacher-training programs; by the end of 1955, about 280 new teachers, better educated and better trained, will be added to the school system.

Expanded Community Development and Increased Dairy Output in Iran

Village councils have been formed in approximately 31,000 of the 42,000 Iranian villages. These councils represent important steps toward wider local self-government and increased community action in planning and carrying out improvement projects. Already, nearly 4,000 projects have been carried out by cooperative effort. Purified water facilities have been installed in 338 communities; bathhouses have been built or expanded in 575 communities. In addition, community construction work has gone forward on 1,512 roads and bridges, 48 clinics, 326 schools, and 362 low-cost houses.

There is an acute shortage of milk in the Iranian diet. Two-year-old heifers of Iranian cows sired by Brown Swiss bulls provided under the technical cooperation program are now producing 4,000 to 6,000 pounds of milk a year. This is in contrast to the 2,000 pounds a year produced by the average native cow in the Tehran area. Feeding methods also have been substantially improved under the cooperative U. S. Iranian program. Sugar factories formerly discarded beet pulp and wasted much of the molasses. Now, enough pulp and molasses is produced annually to feed about 300,000 cows for 200 days a year. The use of the beet pulp and molasses, together with increased production and use of alfalfa, is going a long way toward solving the feed shortage in Iran.

② SOME RECENT ILLUSTRATIVE RESULTS

Improved Education in Liberia

Assisted by FOA education specialists, Liberia has established teacher-training programs in eight main centers of the country. These programs, held during summer vacation periods, provide courses designed to increase the professional competence of Liberia's teachers and promote their functional knowledge and skills. In the past three years, more than 1,500 pre-service and in-service teachers—about 98 percent of the Liberian teaching staff—have benefited. Liberian schools are putting increased emphasis on the functional approach to education, based on the actual needs of the people. Instruction in manual training and agricultural subjects is now part of the elementary school curriculum.

Improved Farm Credit and Public Administration in the Philippines

An effective credit system for small farmers has been developed in the Philippines with the advice and guidance of American technicians. The Philippine Agricultural Credit and Cooperative Financing Administration (ACCFA), established in 1952 in five provinces, has grown and spread rapidly in the past three years. Today, ACCFA has some 250 cooperative credit associations. It has loaned the equivalent of \$9 million to 50,000 farmers over the past 13 months. More than 100,000 members have built their paid-in capital ownership to the equivalent of \$750,000.

The Philippines has also made encouraging progress in the field of public administration. The Institute of Public Administration of the University of the Philippines, working under a technical cooperation project with the University of Michigan, is now in its third year. The Institute is playing an important part in helping to modernize the Philippine public service through its in-service and pre-service training programs. In the past two years, more than 4,000 government executives and employees have participated in these programs.

Additional Rural Housing in Egypt

Low-cost housing construction has been an important part of village development and resettlement in Egypt. The Egyptian-American Rural Improvement Service (EARIS) is carrying out a cooperative program of community development, rural rehabilitation, and land reclamation in the provinces of Buheira and Fayoum. This program calls for the ultimate resettlement of some 16,000 landless farm families. FOA housing specialists have been working with EARIS on housing problems in connection with the resettlement program. During the first quarter of 1955, 90 families were resettled in completed homes in the first new village built at Abis, in Buheira province. Accommodations are being readied for another 210 families at Abis, and plans call for additional housing projects in 10 other villages, each to accommodate 300 farm families.

③ SOME RECENT ILLUSTRATIVE RESULTS

4-H Clubs Transplanted to Formosa

American agricultural extension specialists have helped to develop a 4-H Club program on Formosa that includes nearly 9,500 rural youths in 1,150 4-H clubs. Like their counterparts in the United States, 4-H club members in Formosa work with their local club leaders to plan their own programs for studying and demonstrating improved farming methods in the field. The basic purpose of 4-H youth farmers is to find new ways to be of service to their community. 4-H work is now being carried on in 5 Hsien (counties) and 17 agricultural schools. Reports from the nearly 900 club leaders now working in the program show increasing interest in 4-H work and growing demands for extension of the program to other areas of the island.

Effective Agricultural Extension in Costa Rica

In 1948, a cooperative effort to establish an effective agricultural extension program in Costa Rica was initiated with 3 field offices and 7 agricultural agents. Since then, the extension program has grown steadily. This year, there are 32 field

offices and 106 Costa Rican agents working throughout the country to help the farmer in the field in crop improvement, livestock feeding, farm mechanization, and other activities which will make his farm more productive and easier to manage.

Soon the Costa Rican Ministry of Agriculture will take over full responsibility for the extension program, and FOA technicians will be able to devote their efforts to other projects in the technical cooperation program.

Reduced Malaria in Indonesia

Malaria is Indonesia's greatest single killer, affecting some 30 million people, or nearly 40 percent of the total population. Joint anti-malaria programs have significantly reduced the incidence of disease on 26 islands. To cite an outstanding example of program effectiveness: In the Surabaya region of east Java, 18 out of 100 babies used to be stricken by malaria before their first birthday. After a two-year control program, the incidence of malaria in children under a year in the region was reduced to zero.

Summary*

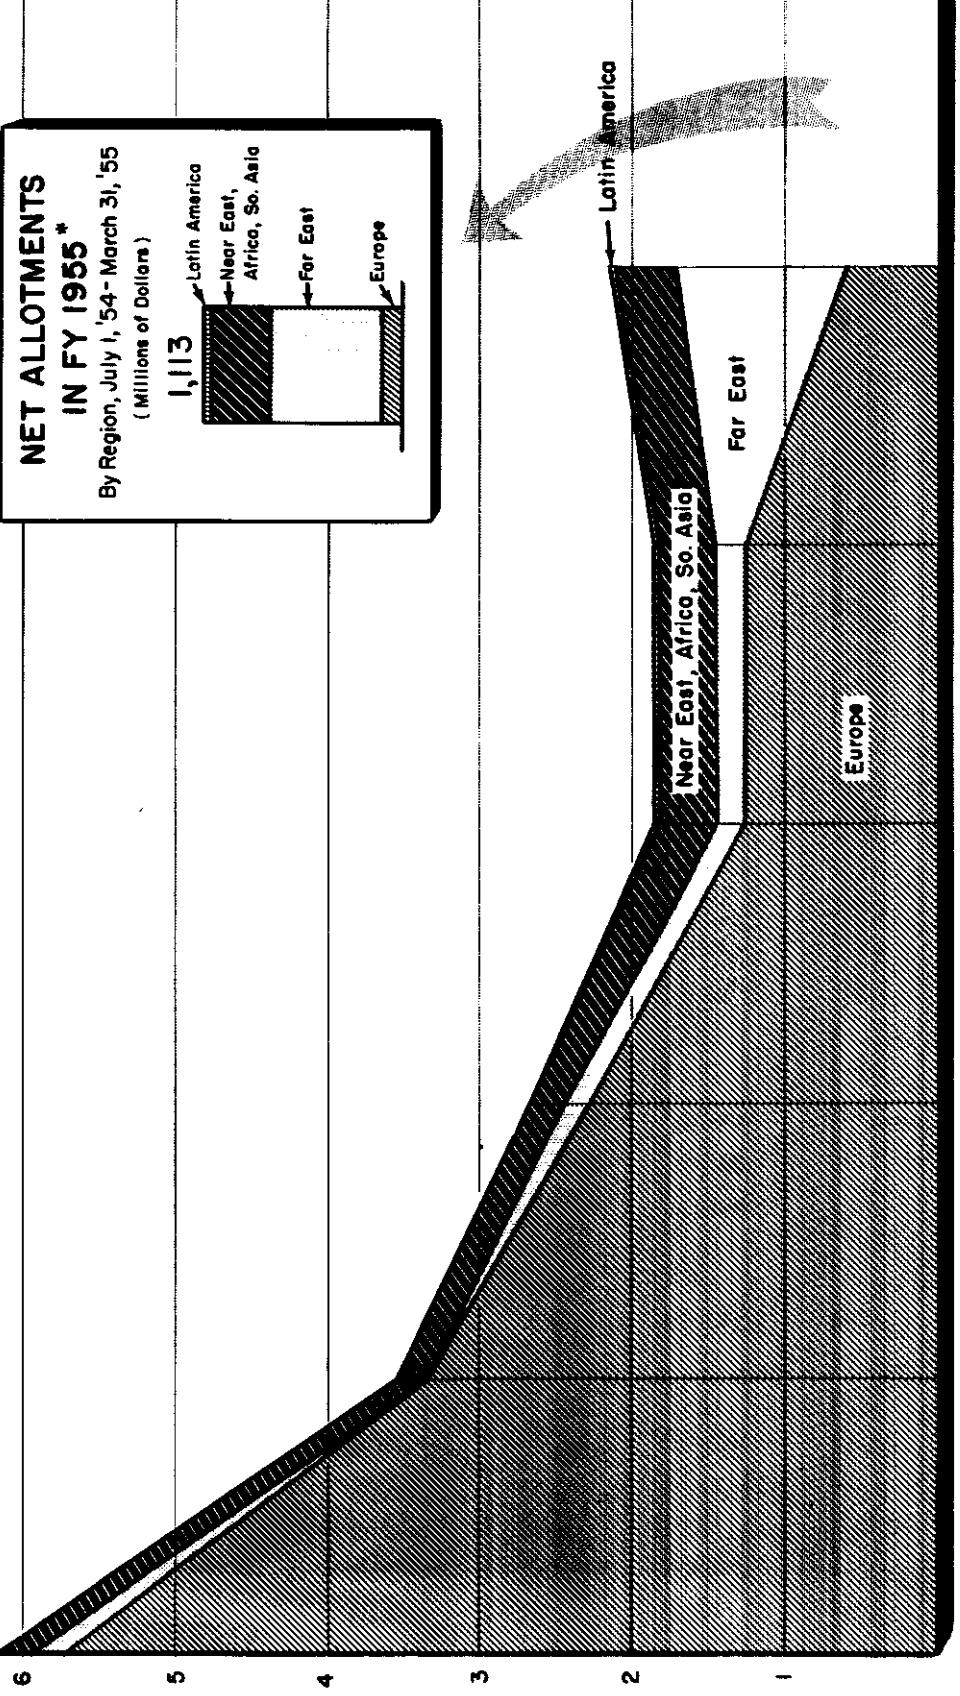

FOA ALLOTMENTS BY REGION UNDER MUTUAL SECURITY PROGRAM

Billions of Dollars

7

April 3, 1948 - March 31, 1955

(15 Months)

NOTE: Includes allotments which are assignable only to specific regions; excludes nonregional.

*

* Includes allotments for sales of U. S. surplus agricultural commodities when sales proceeds will be used for other than direct military assistance.

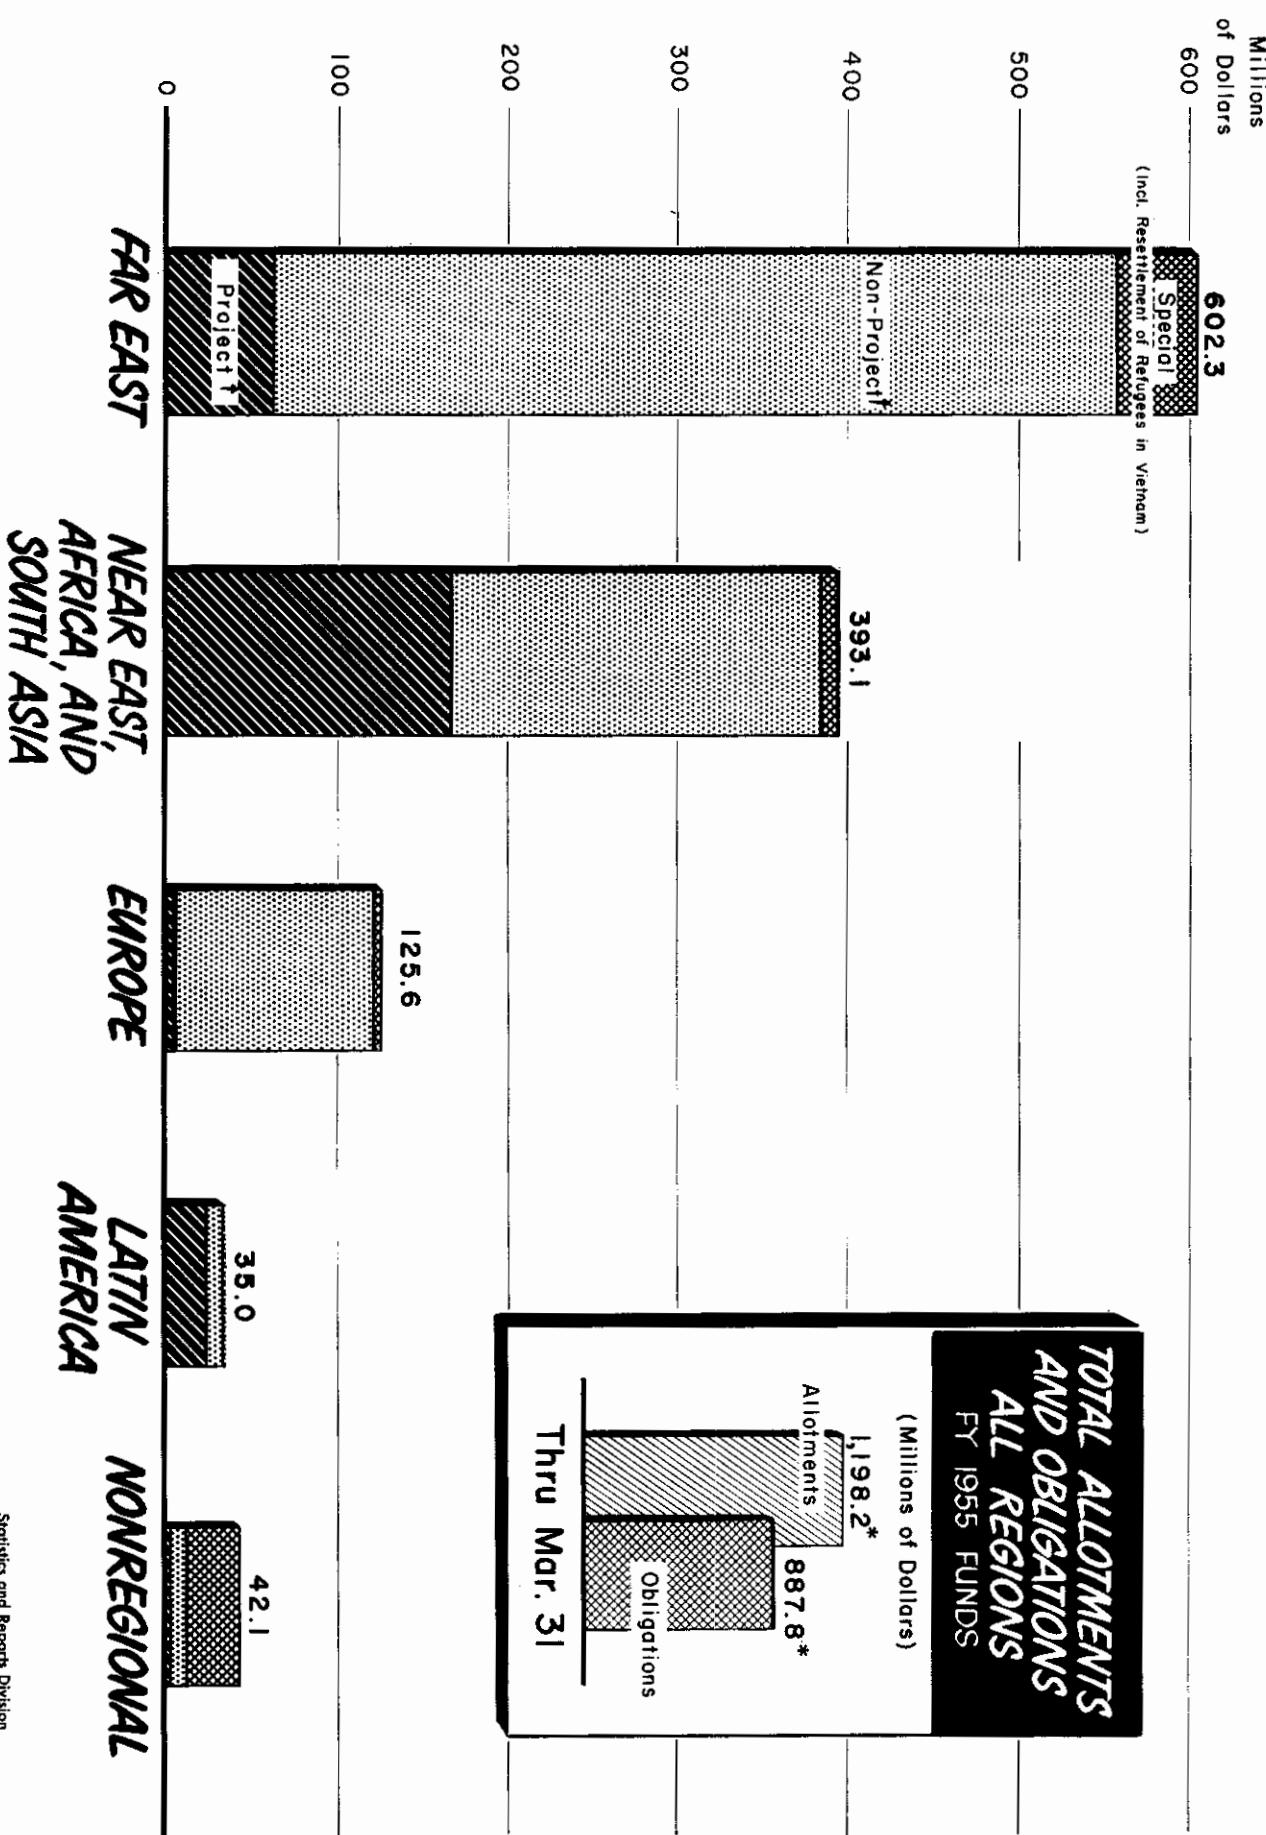

23

FOREIGN OPERATIONS ADMINISTRATION

ALLOTMENTS FROM FY 1955 PROGRAM FUNDS*

BY TYPE OF AID, JULY 1, 1954 - MARCH 31, 1955

* includes allotments and obligations for sales of U.S. surplus agricultural commodities when sales proceeds will be used for other than direct military assistance.

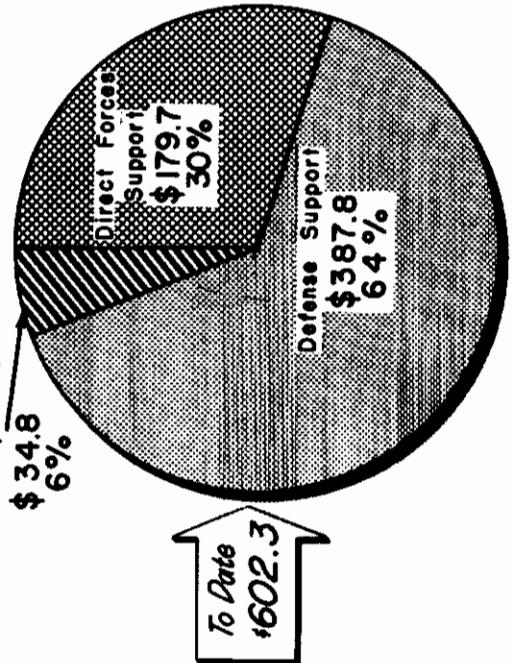

† See preface for definitions of "project", "non-project", etc.

ALLOTMENTS FROM FY 1955 PROGRAM FUNDS *

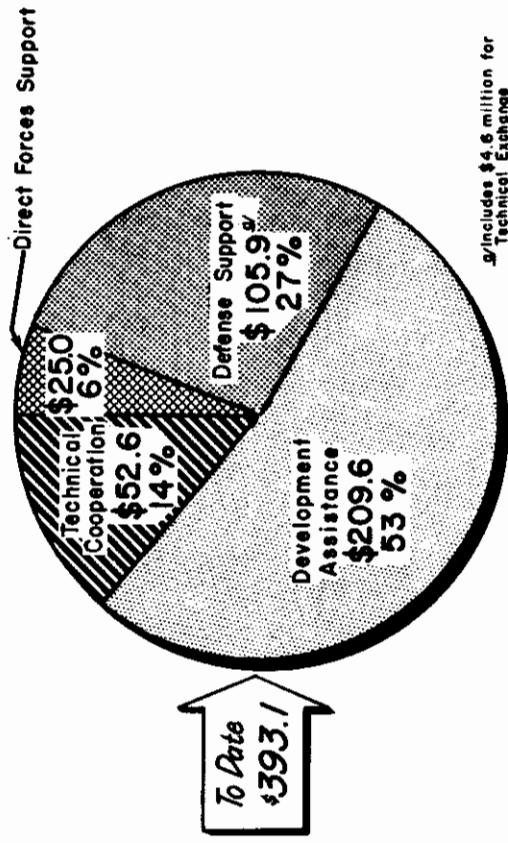

BY PROGRAM CATEGORY WITHIN REGIONS, JULY 1, 1954 - MARCH 31, 1955

FAR EAST

Millions of Dollars

NEAR EAST, AFRICA, AND SOUTH ASIA

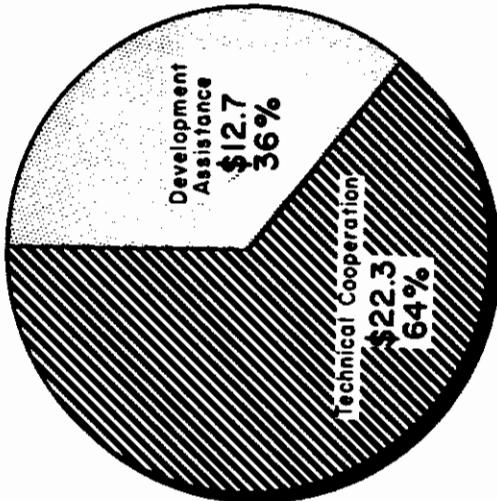

^aIncludes \$4.8 million for
Technical Exchange

EUROPE

Direct Forces Support
\$1.0
1%

LATIN AMERICA

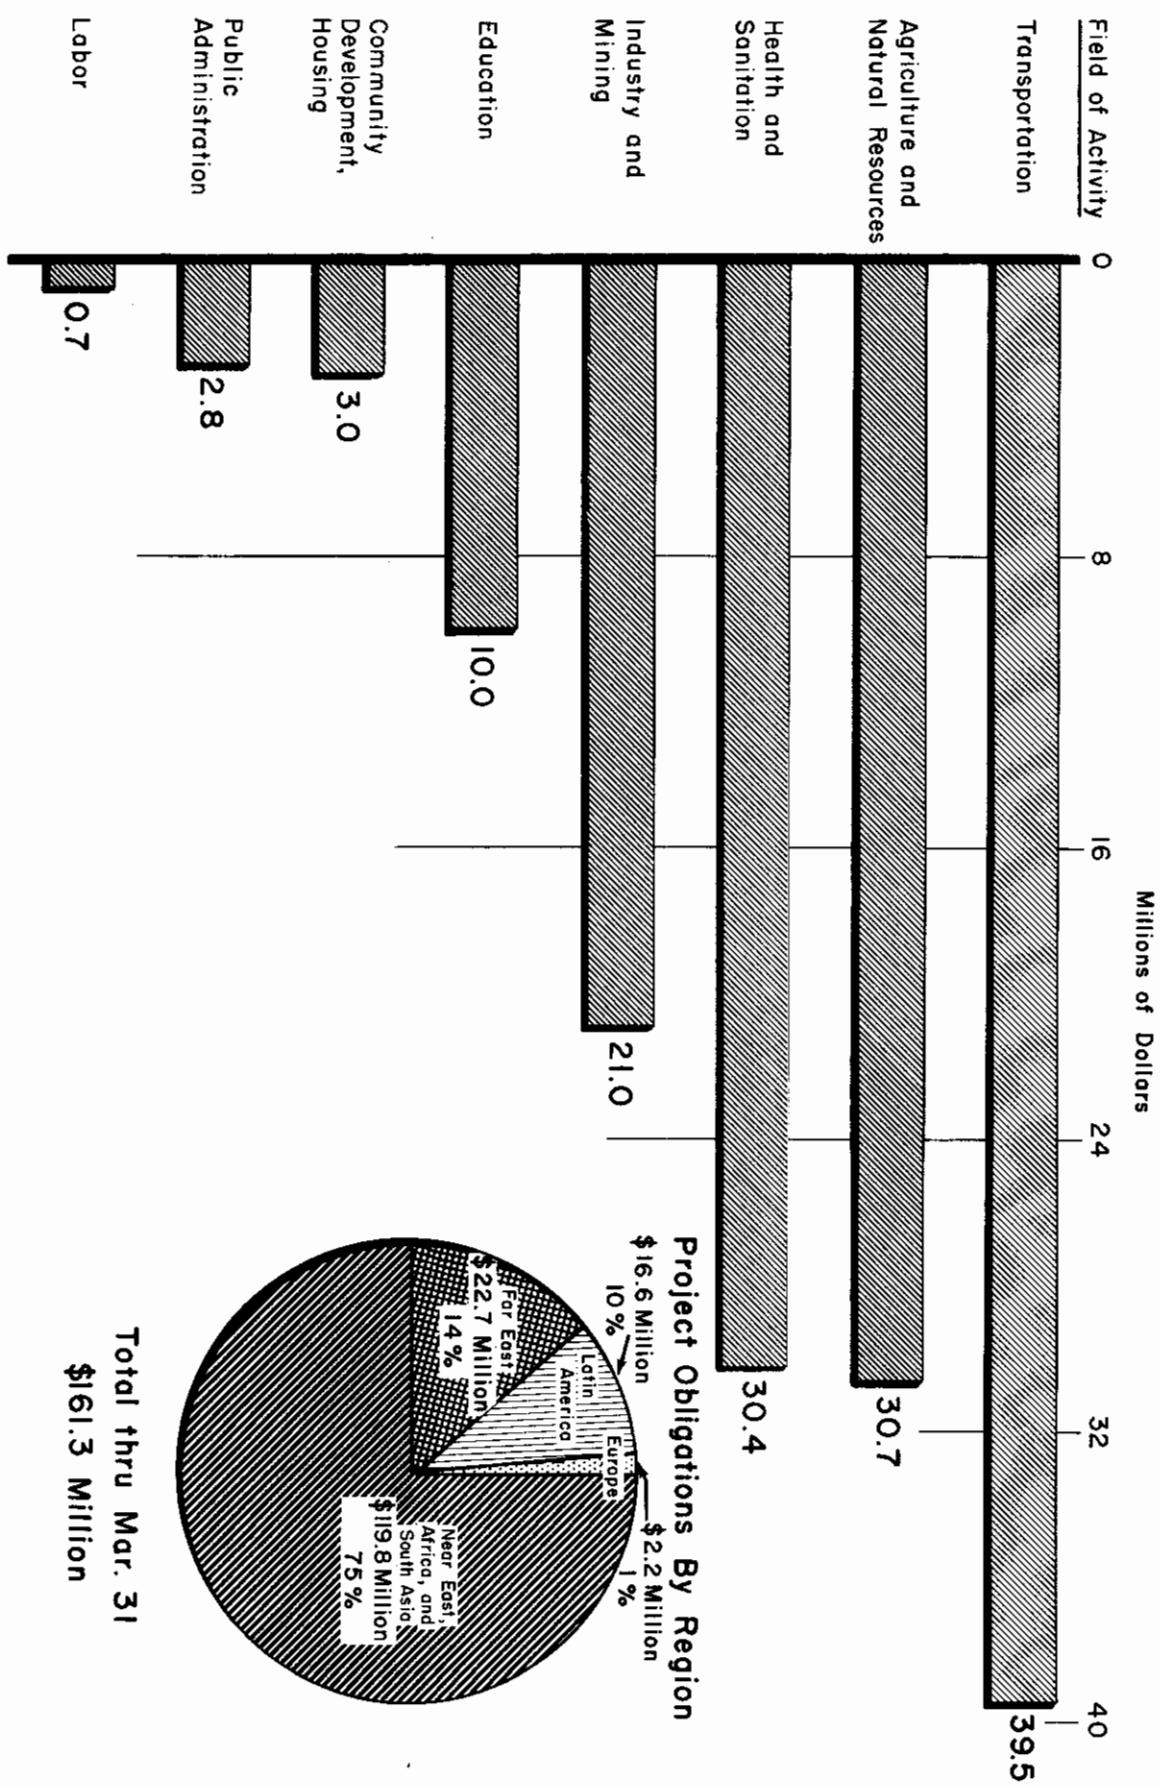

^aIncludes \$4.8 million for
Technical Exchange

* Includes allotments for sales of U.S. surplus agricultural commodities when sales proceeds will be used for other than direct military assistance.
Excludes \$42.1 million for non-regional activities.

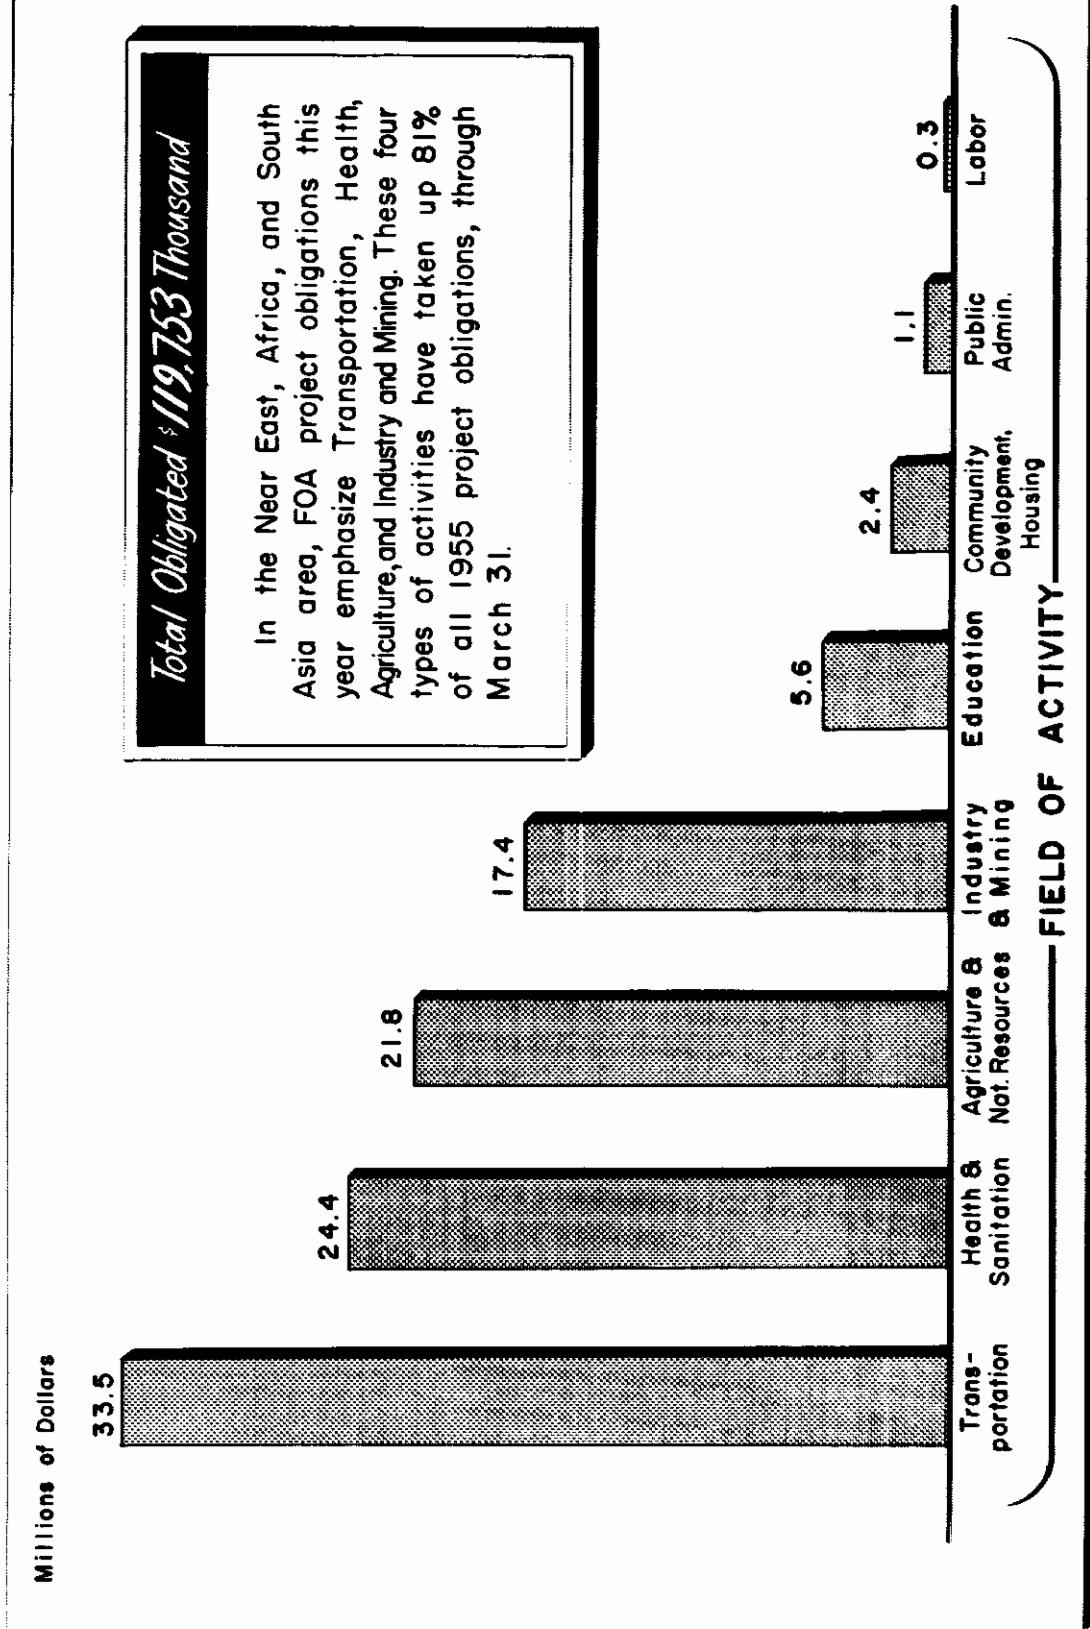

FY 1955 PROJECTS BY FIELD OF ACTIVITY

TOTAL OBLIGATIONS FOR PROJECTS, JULY 1, 1954 - MARCH 31, 1955

PROJECTS IN NEA

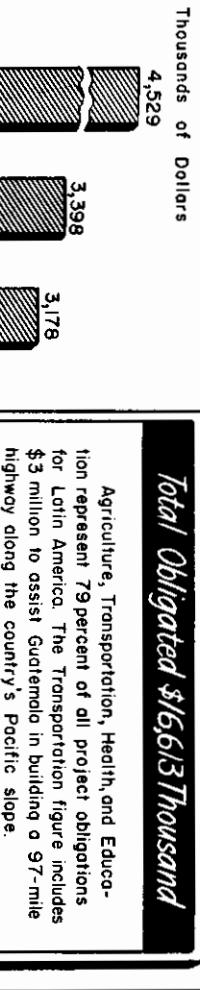

FY 1955 OBLIGATIONS, JULY 1, 1954 - MARCH 31, 1955

NOTE: Detail on chart excludes Miscellaneous and Undistributed Technical Support Costs.

PROJECTS IN LATIN AMERICA

FY 1955 OBLIGATIONS, JULY 1, 1954 - MARCH 31, 1955

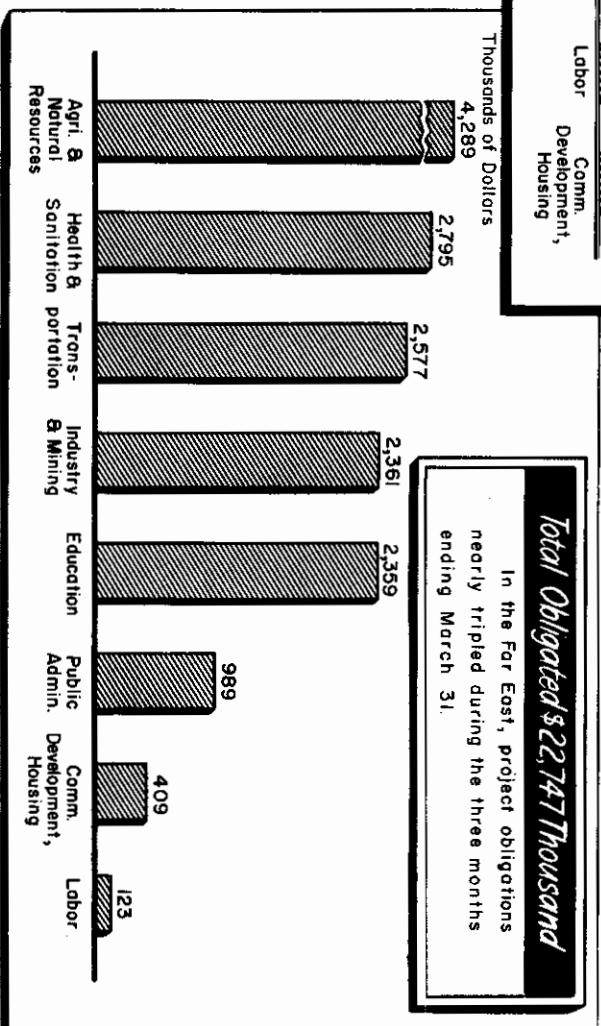

Total Obligated \$16,613 Thousand

Agriculture, Transportation, Health, and Education represent 79 percent of all project obligations for Latin America. The Transportation figure includes \$3 million to assist Guatemala in building a 97-mile highway along the country's Pacific slope.

PROJECTS IN THE FAR EAST

FY 1955 OBLIGATIONS, JULY 1, 1954 - MARCH 31, 1955

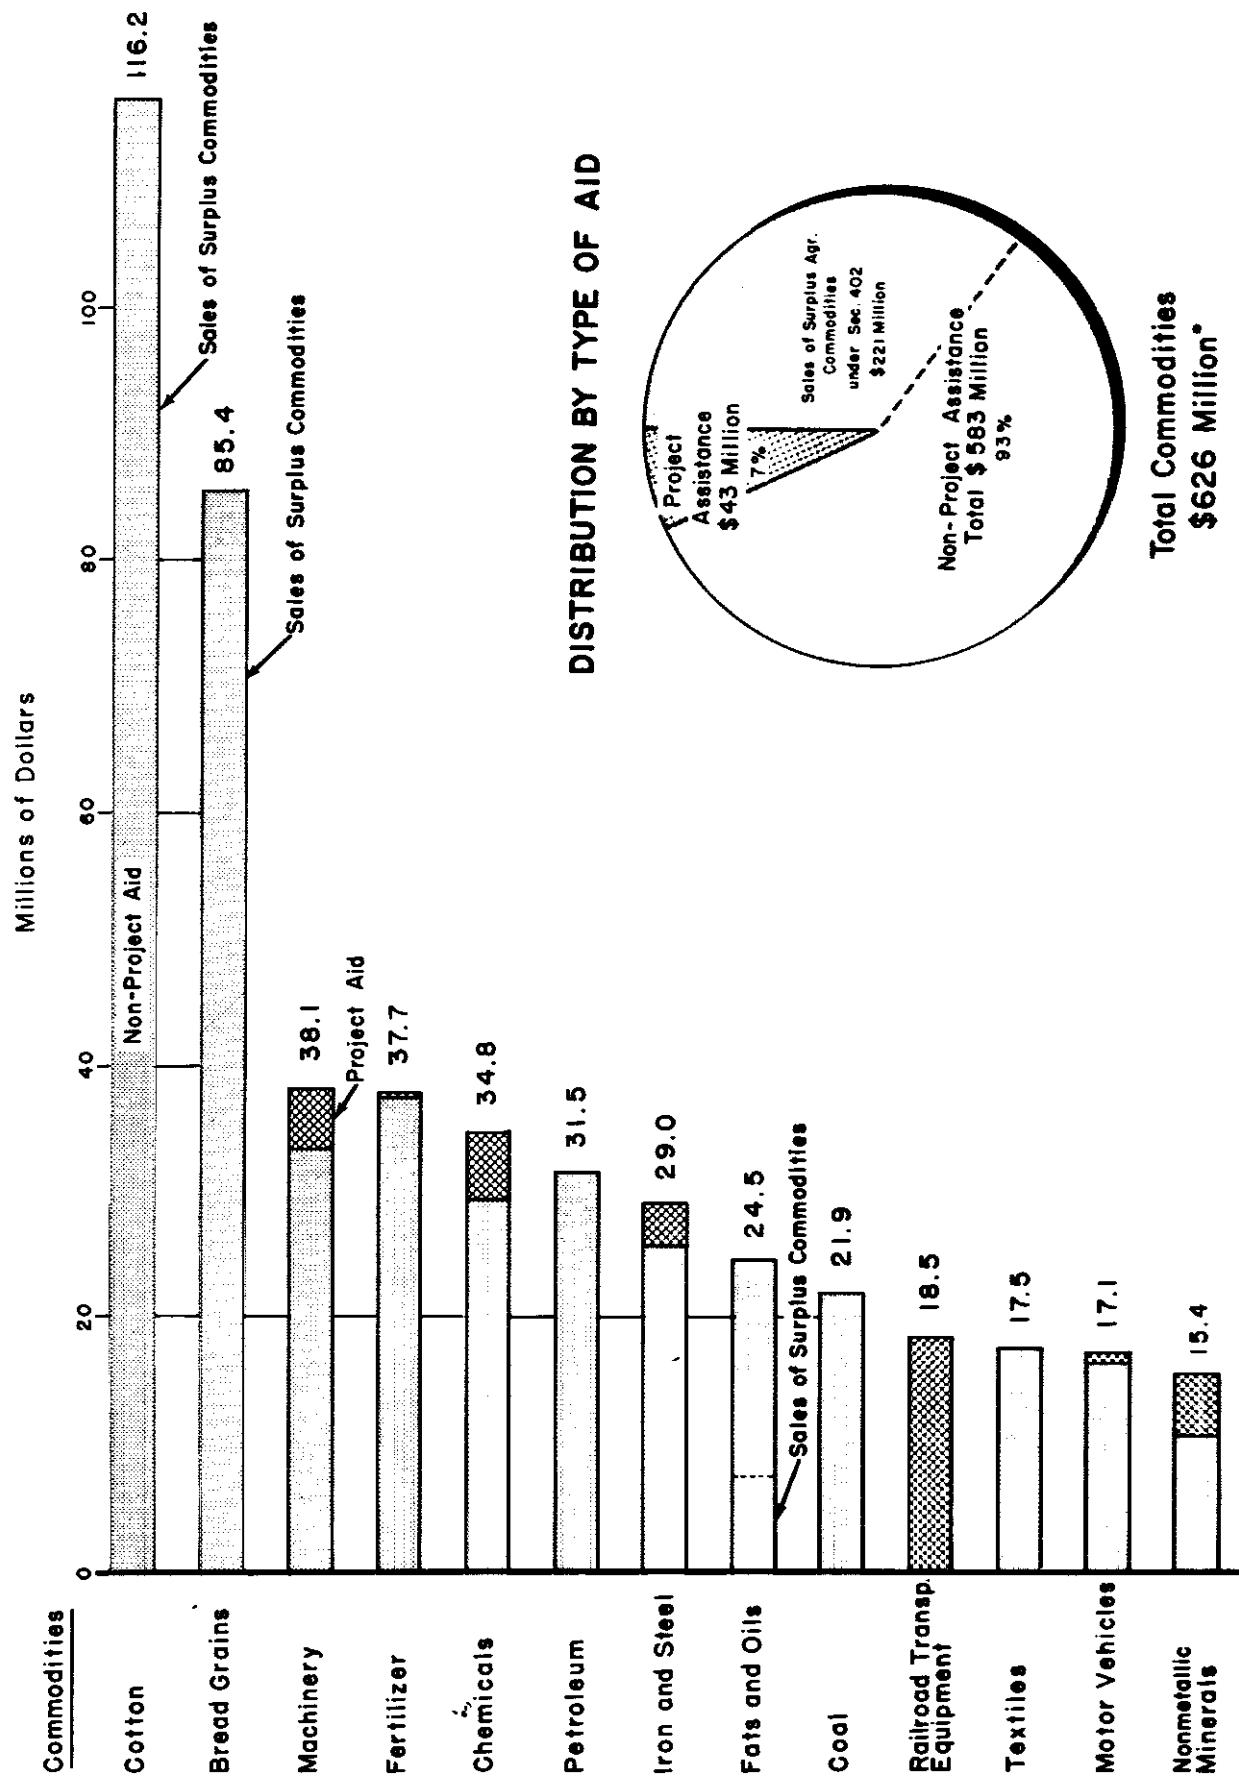

Total Obligated \$22,747 Thousand

In the Far East, project obligations nearly tripled during the three months ending March 31.

Note: Detail on chart excludes Miscellaneous and Undistributed Technical Support Costs.

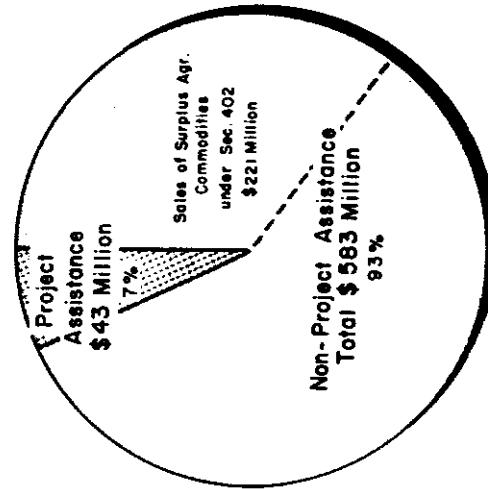

PRINCIPAL COMMODITIES IN FOA PROGRAMS

AUTHORIZATIONS IN FY 1955, THRU MARCH 31*

* Commodities only (both Project and Non-Project). Excludes \$47.5 million for ocean freight and other services.

DISTRIBUTION BY TYPE OF AID

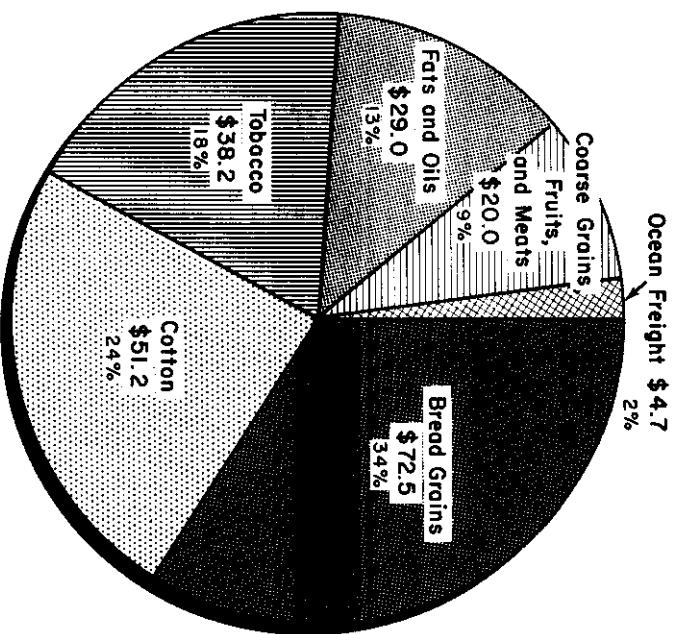

Total Commodities
\$626 Million*

SALES OF SURPLUS AGRICULTURAL COMMODITIES - FY 1954 FUNDS

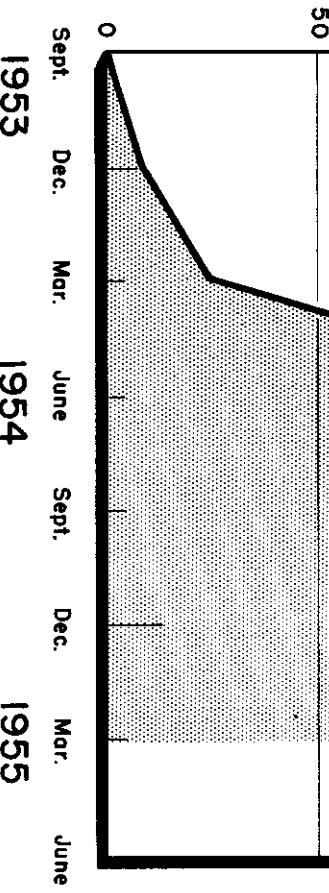

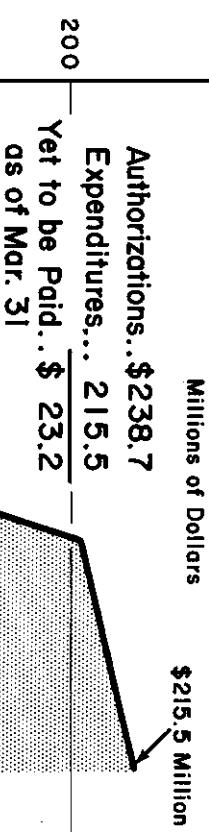

EXPENDITURES UNDER SEC. 550, PUBLIC LAW 118-83rd CONGRESS

COMMODITIES SHIPPED AND PAID FOR

Total \$215.5 Million Expended
As of March 31

TREND OF TOTAL EXPENDITURES

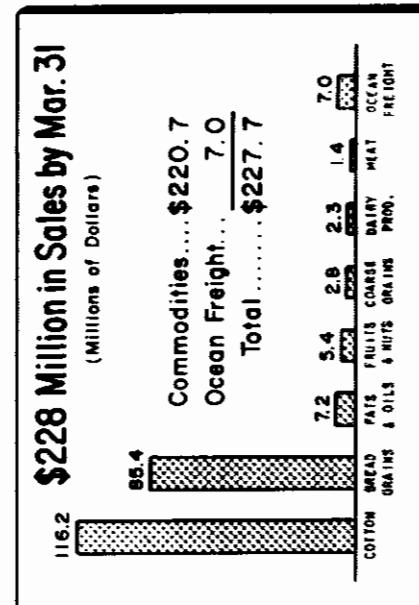

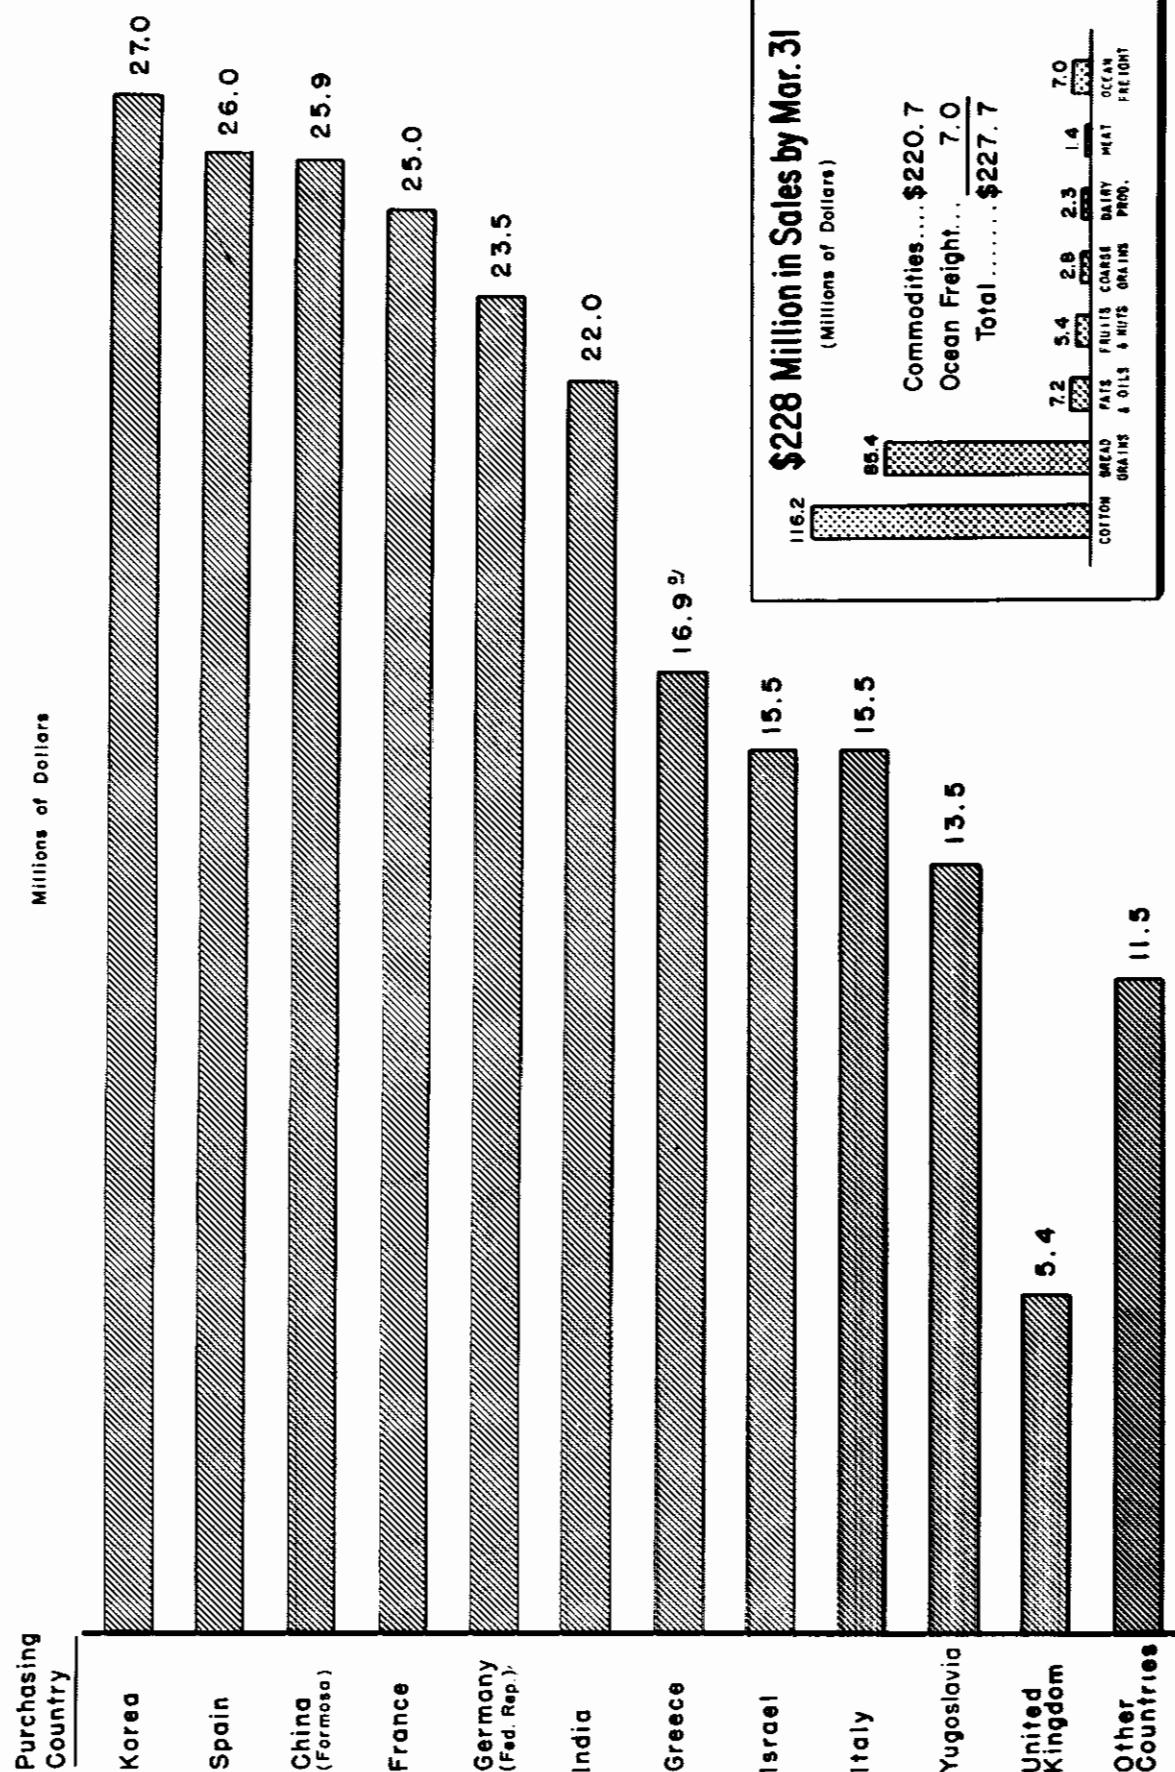

NOTE: Section 550 of the Mutual Security Act of 1951, as amended (for fiscal year 1954), required that not less than \$100 million, and not more than \$250 million of MSP funds be used in fiscal year 1954 to negotiate sales of U.S. surplus agricultural commodities to friendly foreign nations for local currencies. The chart above indicates the expenditures which have taken place under this Section.

SALES OF SURPLUS AGRICULTURAL COMMODITIES - FY 1955 Funds

SECTION 402, PUBLIC LAW 665-83RD CONGRESS

Authorizations by Country, July 1, 1954 - March 31, 1955

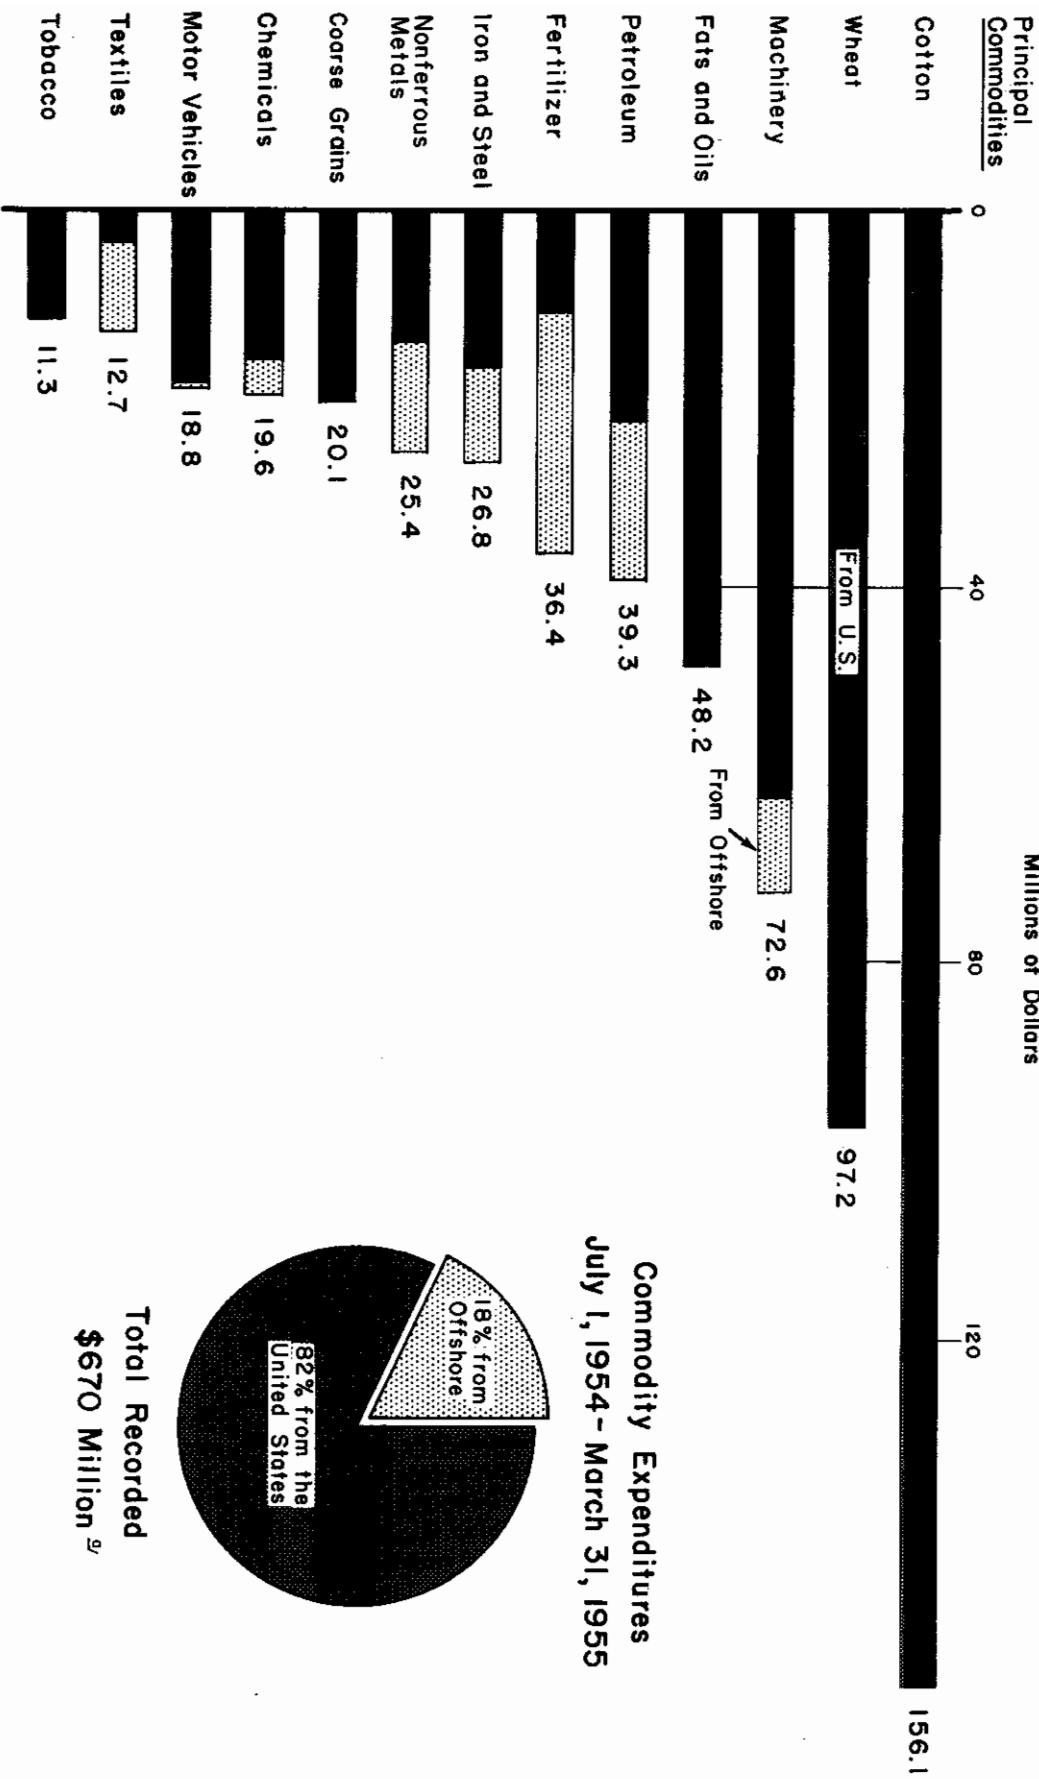

NOTE: Section 402 of the Mutual Security Act of 1954 provided that not less than \$350 million of MSP funds should be used in fiscal year 1955 to negotiate sales of U.S. surplus agricultural commodities to friendly foreign nations for local currencies. This chart indicates the status of authorizations issued by March 31, by purchasing country and commodity.

^aExcludes \$2.2 million reobligated from prior years funds.

U.S. SUPPLIERS PROVIDE MOST OF THE GOODS

FOA PAID SHIPMENTS, JULY 1, 1954 - MARCH 31, 1955

During the first nine months of fiscal year 1955, FOA expenditures under commodity programs totaled \$670 million. Of this total, \$555 million, or 82 percent, came from suppliers in the United States. All of the cotton, wheat, fats and oils, coarse grains, and tobacco came from the U. S., as did practically all of the machinery and vehicles.

* Includes shipments under surplus agricultural commodity sales programs; data based on expenditures against procurement authorized in Washington.

^a Reflects adjustments of unclassified commodities.

^a/Available for payment against military offshore procurement contracts let by U.S. Government;

^b/Some sales may go to third countries.

^c/Sales proceeds of purchases by the mother countries will be used in the African DOT's as follows,

^d/In dollar equivalents: French \$5 million; Italian, \$300 thousand, and British, \$5 million.

^e/Tentatively programmed for purchase of Finnish commodities as follows, in dollar equivalents:

Military Assistance - European countries, undistributed, \$2 million; Defense Support - Berlin refugees \$1.8 million; European countries, undistributed \$200 thousand and Greece \$1 million.

^f/Includes purchases by the mother country the sales proceeds of which will be used for their dependent overseas territories.

^g/Local currency sales proceeds are calculated at \$7,250 thousand less than the U.S. dollar cost of the commodities.
